Internal Family Systems (IFS) is a powerful, evidence-based and non-pathologising model of psychotherapy that is highly effective for working through sexual issues. Whether it is for expanding erotic potential or easing internal distress, IFS can help clients understand their internal parts to create more pleasurable and empowering sexual experiences. A reflective, educational space for you to become more familiar with the principles of IFS and build skill confidence. This space will also help you with identifying your own therapist parts that come up when working with clients around sexual issues. Become connected to an inclusive and supportive Australian IFS community. A combination of case presentations and group discussions drawing from the expertise within the group, will form the basis of this supervision space.
